Allowable Subject Matter

1. Claims 1-39, 49 and 50 are allowed.

Claims 1, 5, 9, 13, 26-27, 35, 49-50 are independent claims.

The following is an examiner's statement of reasons for allowance:

As to claims 1, 5, and 9, the present invention from the application discloses a printing system, a method and control program for performing a print process, “wherein the information means (step) enabling to inhibit informing the user of the paper output place information when a request is not issued by the requisition means (step), and wherein the information means (step) enabling to inform the user of information by which the user can confirm which paper output place of which printer is used for the designated print job, when the request is issued by the requisition means (step) in a case where plural printers are present in the printing system”.

As to claims 13, 26 and 49, the present invention from the application discloses a printing system, a method and control program for performing a print process in which “the notification unit (step) enabling a notification of information including information by which the user can confirm which sheet storage unit of which printer is used for the designated print job, when the request is issued by performance of the request unit (step) in case where plural printers are present in the printing system”.

Art Unit: 2624

As to claims 27, 35 and 50, the present invention from the application discloses a printing system, a method and control program for performing a print process in which "the response output unit (step) enabling output of information including information by which the user can discriminate which sheet storage unit of which printer is used for the designated print job, when the request is input by the request input unit (step) in case where plural printers are present in the printing system".

The closest prior art such as Nishiwaki (US Patent No. RE37,031 E) discloses a printer which has a function of locking bins containing printouts so that the security of each printed material can be protected; and Mandel (US Patent No. 5,435,544) teaches the customer can additionally or alternatively look at the mailbox user interface and find out all the various customer names and bin locations of customers currently having jobs in the mailbox unit. However, the combination of Nishiwaki and Mandel, including an updated electronic text search, fails to anticipate or render the above underlined limitations from claims 1, 5, 9, 13, 26-27, 35, 49-50 obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
